

METHOD, SYSTEM, AND PROGRAM FOR
ACCESSING FILES IN A FILE SYSTEM

ABSTRACT

Disclosed is a system, method, and program for processing an input file in a
5 file system, wherein the input file has an input file name. A function is applied to
map the input file name to a value. A data structure is processed to determine
whether there is a preexisting file in the file system having a name that maps,
according to the function, to the same value to which the input file name maps. Two
files that map to a same value according to the function are capable of having a same
10 name.
